

WATERWATCHER™ DATA ACQUISITION

Actively monitoring the health of produced water

- Records & transmits water quality data every 30-min
- Alleviates need to regularly send personnel to acquire and test water samples
- Customizable data acquisition:
 - Oxidation-Reduction Potential (ORP)
 - H₂S Gas (from above the water surface)
 - Conductivity
 - Dissolved Oxygen (DO)
 - Water Depth
- Provides alerts when pre-established data thresholds are surpassed
- Autonomous & solar-powered; designed to withstand the harsh conditions of the oilfield
- Floating module may be positioned in zone of interest
