

Application Instructions

CONGRATULATIONS!

And thank you for purchasing WaterSavr O&G™ – a safe, economical, and environmentally friendly product that reduces water evaporation from open water storage ponds.

CAUTION

Always wear the proper PPE when handling and applying this product. Safety glasses and latex or nitrile gloves should be worn when handling WaterSavr O&G™ pouches. If loose WaterSavr™ powder is present, refer to the WaterSavr™ SDS for PPE requirements.

Do not cut or rip the pouches containing the powdered product. The packaging material dissolves in water to release the product.

Consult the SDS in the event that the pouches are ruptured and a spill occurs.

Store the shipping containers in a dry environment and ensure the inside is maintained dry.

Keep the lid of the shipping containers properly closed and sealed when not in use.

Apply this product only to the company’s water storage ponds.

RECOMMENDED DOSAGE

Apply 1 pouch per ½-acre of water storage; each pouch contains ½-lb of material. (e.g. product dosing is dependent on surface area of the pond, not total volume)

The product must be re-applied every three (3) days.

DO NOT UNDER-DOSE the storage pond, as this will impact effectiveness of the product.

HOW TO APPLY

Retrieve the proper number of pouches for the size of the pond being treated (see table).

If possible, approach the pond from its upwind side.

Throw the pouches into the water such that they enter at a distance from the pond’s edge.

Re-apply every three (3) days or as needed.

WATER PIT SURFACE AREA (ACRES)	NUMBER OF ½-LB POUCHES
1	3
1 ¼	3
1 ½	4
1 ¾	4
2	5
2 ¼	5
2 ½	6
2 ¾	6
3	7
3 ¼	7
3 ½	8
3 ¾	8
4	9
4 ¼	9
4 ½	10
4 ¾	10
5	11
